ADS-B OUT UPGRADE SOLUTION for ATR 42 & ATR 72 aircraft

Scandinavian Avionics offers a complete ADS-B OUT solution containing all necessary units and documents for a mandate compliant retrofit upgrade. This solution is designed to easily interface to existing equipment on board the aircraft, reducing installation time and lowering the overall cost of compliance.

We have developed and certified the EASA approved STC10075520, ADS-B upgrade for ATR 42 and ATR 72 aircraft, supplied with a complete installation kit comprised of a pre-wired shelf harness, fully manufactured brackets and other installation materials needed.

Our STC Kit Package will ease the installation in the field. It will enable facilities to complete the upgrade tasks even if limited B2 staff is available. If time is limited we can also provide the entire upgrade including installation.

The Scandinavian Avionics ATR ADS-B OUT Upgrade Solution consist of:

- STC package, including all relevant documents and manuals.
- STC covering ADS-B OUT, ELS and EHS.
- Replacement of existing transponder system by 2ea. Garmin GTX-3000 ADS-B Transponders.
- Installation of ADS-B FAIL annunciation system.
- Installation of 1ea. Garmin GPS-3000 WAAS GPS Sensor.
- Installation of 1ea. WAAS GPS Antenna.
- Installation of Air Data compensation system - when required, for aircraft equipped with non-compliant ADC.
- Complete installation kit
